- H** Socket screw M6x30 (8x)
- I** Socket screw M6x35 (2x)
- J** Cap nut (4x)
- K** Washers (2x)

# ASSEMBLY

## Step 1

### Bottom Braces

Locate the foot **F** with the four holes on the bottom. Attach this foot to the bottom braces **D** as shown. For each brace use two M6 x 30 socket screws **H**.

Fasten the other foot to the braces on the opposite side. Lay the bottom of the stand on the floor. If it wobbles, check to see if the bottom braces are installed correctly.

## Step 2

### Side Arms to Bottom

Fasten the side arms **E** to the top of the feet using the two M6 x 15 hex socket screws **G** with washers **K** and the two nylon filled cap nuts **J**. Be careful to not overtighten. The side arms should collapse into the bottom with relative ease.

## Step 3

### Guitar Tree to Side Arms

Attach the guitar tree **C** to the top of the side arms **E** with two M6 x 35 socket screws **I** (one through the top of the guitar tree directly above each side arm.) Then, secure it with a washer **K** and cap nut **J**.
